

# Tic tac toe **■**

Tic-tac-toe is a pencil-and-paper game for two players, X (ascii value 88) and O (ascii value 79), who take turns marking the spaces in a 3×3 grid. The player who succeeds in placing three respective marks in a horizontal, vertical, or diagonal row wins the game. Empty space is represented by \_ (ascii value 95), and the X player goes first.

Here is an example game won by the first player, X:

The function nextMove takes in a char player, and the 3x3 board as an array. Complete the function to print 2 space separated integers r and c which denote the row and column that will be marked in your next move. The top left position is denoted by (0,0).

#### How does it work?

Your code is run alternately with the opponent bot for every move.

#### Example input:

X ----X0

### Example output:

1 0

## Explanation:

The board results in the following state after the above move
